Tested. Trusted. Clean.

Clean water you can rely on

PHILIPS
Certified InstantTrust technology disinfects water just before it’s served

A range of tested and validated solutions

Philips InstantTrust is our new standard in the industry for disinfection solutions in drink/water dispensers, providing clean water in an instant, independent of water temperature. It is now certified to major water standards (see backpage). Already being designed-in by several OEMs, InstantTrust is available in a range of tested, validated solutions including inline and point-of-dispense versions.
Here are some more reasons:

- **Freshness**: Cold water remains cold.
- **Worry-free**: InstantTrust is designed to disinfect 10,000 liters of water and will signal when it should be replaced.
- **Almost zero energy costs**: Only switches on when water is flowing, so energy costs are around 40 cents for 10,000 liters! (calculated at 0.20 EUR kWh)
- **A sustainable choice**: Contains no mercury, and fulfills ROHS requirements.
- **Reliable disinfection**: InstantTrust has been designed to exceed during its entire life the minimum required disinfection level as agreed with the customer. There is a stringent quality control during production to ensure that all products meet their requirements.

**Extensively tested**

InstantTrust has undergone extensive testing and microbiological validation. In the table below you will find the results from an external certified laboratory which measured the reduction of MS2 and E.coli species at different flow rates and water UVC transmissions.

Results of disinfection performance of InstantTrust technology.

In other labs, tests were performed on different microorganisms such as yeast, Micrococcus lutea, K. terrigena, Brevundimonas diminuta, HPC and Pseudomonas Aeruginosa. All results met customers’ expectations and requirements.

Reliability is tested in extreme conditions during the design phase to ensure the lowest possible failure rate.

Disinfection performance is tested on a regular base during production in our in-house microbiological laboratory both at 0 hours and after reaching end of life.
A range of solutions to meet your needs

In-line solutions:
- 6-Pin connector or jack plug
- With or without cooling plate

Point-of-dispense solutions:
- Water dispensed directly out of InstantTrust

General specifications
- Input voltage: 9V DC
- System Power: 21 – 27W
- Water flow of up to 4 liter/minute
- Treatment capacity: 5000 liter up to 15000 liter of water depending on water quality, flow rate and required disinfection performance
- Different connections to water possible.

Certified for use in water treatment equipment

Philips InstantTrust (27W in-line solution) has been granted the following certifications:
- Compliance with applicable CE guidelines
- UL approved (electrical safety)
- Certificate of approval for materials in contact with drinking water, from:
  - National Institute of Public Health (Poland)
  - ACS (France)
  - KIWA (Netherlands)
  - Intertek (for WRAS requirements in UK)
- Microbiological performance has been verified at different flows and water qualities by a certified US laboratory.
